Pseudocode

```
Display welcome message

Display name, student_id, unit, lecturer

Display difficulty options ( easy, medium, or hard)

Input difficulty

WHILE difficulty not in  ( easy, medium, or hard)

Display " Invalid input. Try again"

 Input difficulty

IF difficulty = easy

      Questions = 3

      Numbers = 3

      Low = 1

      High = 10

ELSE IF difficulty = medium

        Questions = 5

       Numbers = 4

        Low = 5

        High = 15

ELSE IF difficulty = hard
```

```
    Questions = 7

    Numbers = 5

    Low = 10

    High = 20

     Set score = 0

For each question from 1 to total questions

Generate list of random numbers between Low and High

Ask for sum / max / min / product

IF answer is correct

     Increase score

     Print “Correct”

ELSE

       print correct answer

End loop

Print final score

END
```
